The prior art fails to teach or suggest a wireless input device to be manipulated by a user via a first input part and a second input part the input device comprising: a

case; a **first detachable upper cover that is connectable to the case to form an inside volume that is swappable with a second detachable upper cover and an antenna which is located at an uppermost portion of the inside volume to wirelessly transmit a radio wave that comprises coordinate data to a receiving unit that is connected to a processing unit and detachable from the case along with each of the detached upper covers, wherein the first input part is arranged on the first detachable upper cover and detachable with the first detachable upper cover from the second input part and wherein the input device is a mouse type input device and data is input to the second input part by an interaction of the second input part and a fixed surface** as claimed in claim 11.

The prior art fails to teach or suggest a wireless input device to be manipulated by a user via a first input part, having a case including a second input part and **a first detachable upper cover connectable to the case with a fastener to form an inside volume and swappable with a second detachable upper cover, wherein the first detachable upper cover includes an antenna to wirelessly transmit data and includes the first input part, the antenna arranged within an inner volume of the first detachable upper cover includes an antenna to wirelessly transmit data and includes the first input part, the antenna arranged within an inner volume of the first detachable upper cover or formed on a surface of the first detachable upper cover, wherein the first input part is detachable with the first detachable upper cover from the second input part and wherein the input device is a mouse type**

input device and data is input to the second input part by an interaction of the second input part and a fixed surface as claimed in claim 20.

The prior art fails to teach or suggest a cover for a wireless mouse type input device to be manipulated by a user, having a first input part and an antenna in a first arrangement arranged within an inner volume of the cover or formed on a surface of the cover to transmit data received from the first input part and a second input part that is not installed in the cover wherein the cover is swappable with another cover having an antenna in a second arrangement and the first input part is detachable with the cover from the second input part and wherein data is input to the second input part by an interaction of the second input part and fixed surface as claimed in claim 23.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
